# TeXify Quick Guide

From installation to your first PDF

The TeXify team | October 11, 2026

## Contents

**1 Installation** 1

**2 Your first document** 1
2.1 Pick a template . . . 1
2.2 Write the content . . . 1
2.3 Create the PDF . . . 2

**3 Tips** 2

## 1 Installation

TeXify is a single binary. Download it from the releases page or install it with Cargo – it takes less than a minute:

```
cargo install --git https://github.com/SchulzOli/TeXify texify
texify doctor
```

Without a local LaTeX engine TeXify builds through Docker automatically.

## 2 Your first document

### 2.1 Pick a template

`texify templates` lists every template. `texify new letter letter.md` creates a starting point from its example.

### 2.2 Write the content

The content is plain **Markdown**. Structured data such as addresses or invoice items goes into the header (*frontmatter*) between two `--` lines.

### 2.3 Create the PDF

```
texify build letter.md --open
```

## 3 Tips

| You want . . . | Do this |
|---|---|
| A different colour | `accent: 2E7D32` in the frontmatter |
| A serif font | `font: serif` |
| German output | `lang: de` |
| Your sender data only once | `texify init` and `[defaults.sender]` |
| Your own design | `texify templates eject letter` |
